DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-15 are drawn to a system of manufacturing a storage device, classified in class 29, subclass various.
- II. Claims 16-28 are drawn to a method of manufacturing a storage device, classified in class 228, subclass various.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group II and Group I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus can be used in adhesive bonding.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

During a telephone conversation with Stephen Neal on 1-25-05 a provisional election was made without traverse to prosecute the invention of Group II, claims 16-28. Affirmation of this election must be made by applicant in replying to this Office action. Claims 1-15 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 16-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Admitted Prior Art (AAPA) in view of Adams (3,566,207). AAPA teach physically stabilizing, by a placement device (figure 2c, item 220), a hard drive head device for electrical bonding of said head device to a hard drive arm component and utilizing (figure 2b, item 202 and 206), by said placement device (figure 2c, item 220) wherein said hard drive head device is a hard disk drive magnetic head (figure 2b, item 202); wherein said hard drive arm component is a suspension tongue (figure 2c, item 212); wherein said electrical bonding is ball bonding (figure 2b, item 204); wherein said electrical bonding is a type selected from the group consisting of gold ball bonding (GBB), solder bump bonding (SBB), ultrasonic welding, and stitch bonding (figure 2b, item 204); providing an alignment pin protruding from said placement device (figure 5, item 62); where the alignment pin is capable of being inserted into a suspension tooling hole for ensuring said proper alignment (Figure 5, item 62). Adams teach sub-ambient pressure to maintain the position for said electrical bonding (figure 1, item 62). It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the method of AAPA to utilize the vacuum head in order to ensure the proper placement of the workpiece (see Adams col. 3, 11. 50-75).

Art Unit: 1725

Allowable Subject Matter

Claims 24-28 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is an examiner's statement of reasons for allowance: The prior art of record does not suggest or teach a method of manufacturing a data storage device, particularly the first and second vacuum tube structure.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jonathan Johnson whose telephone number is 571-272-1177. The examiner can normally be reached on M-Th 7AM-5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tom Dunn can be reached on 571-272-1171. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
